

WHAT IS NONLINEAR PROGRAMMING?

Nonlinear optimization \equiv nonlinear programming

Part 0: A gentle introduction
to nonlinear optimization

Nick Gould (RAL)

minimize $f(x)$ subject to $c_E(x) = 0$ and $c_I(x) \geq 0$
 $x \in \mathbb{R}^n$

MSc course on nonlinear optimization

AN EXAMPLE

Optimization of
a high-pressure
gas network

British Gas (Transco)
Oxford University
RAL

WHAT IS NONLINEAR PROGRAMMING?

Nonlinear optimization \equiv nonlinear programming

minimize $f(x)$ subject to $c_E(x) = 0$ and $c_I(x) \geq 0$
 x

where

objective function $f : \mathbb{R}^n \rightarrow \mathbb{R}$

constraints $c_E : \mathbb{R}^n \rightarrow \mathbb{R}^{m_E}$ ($m_E \leq n$) and

$c_I : \mathbb{R}^n \rightarrow \mathbb{R}^{m_I}$

◦ there may also be integrality restrictions

NODE EQUATIONS

$q_1 + q_2 - q_3 - d_1 = 0$

where q_i flows
 d_i demands

In general: $Aq - d = 0$
• linear
• sparse
• structured

PIPE EQUATIONS

$$p_2^2 - p_1^2 + k_1 q_1^2 s_{359} = 0$$

where p_i **pressures**

q_i **flows**

k_i **constants**

In general: $A^T p^2 + K q^2 s_{359} = 0$

- non-linear
- sparse
- structured

COMPRESSOR CONSTRAINTS

$$q_1 - q_2 + z_1 \cdot c_1(p_1, q_1, p_2, q_2) \geq 0$$

where p_i **pressures**

q_i **flows**

z_i **0–1 variables**

= 1 if machine is on

c_i **nonlinear functions**

In general: $A_2^T q + z \cdot c(p, q) \geq 0$

- non-linear
- sparse
- structured
- 0–1 variables

OTHER CONSTRAINTS

Bounds on pressures and flows

$$\begin{aligned} p_{\min} &\leq p \leq p_{\max} \\ q_{\min} &\leq q \leq q_{\max} \end{aligned}$$

- simple bounds on variables

OBJECTIVES

Many possible objectives

- maximize / minimize sum of pressures
- minimize compressor fuel costs
- minimize supply
- + combinations of these

STATISTICS

British Gas National Transmission System

- 199 nodes
- 196 pipes
- 21 machines

Steady state problem

~400 variables

24-hour variable demand problem with 10 minute discretization

~58,000 variables

Challenge: Solve this in real time

(SOME) OTHER APPLICATION AREAS

- minimum energy problems
- structural design problems
- traffic equilibrium models
- production scheduling problems
- portfolio selection
- parameter determination in financial markets
- hydro-electric power scheduling
- gas production models
- computer tomography (image reconstruction)
- efficient models of alternative energy sources

TYPICAL PROBLEM

This problem is typical of real-world, large-scale applications

- simple bounds
- linear constraints
- nonlinear constraints
- structure
- global solution “required”
- integer variables
- discretization

CLASSIFICATION OF OPTIMIZATION PROBLEMS
